

Outline of section LYSIANDRA

- 1a Anther-sacs separated by the enlarged connective; plants glabrous
(at most papillate on adaxial leaf surface).
- 2a Pistillate disk dissected into 6 lobes; fruiting calyx accrescent. subsect. 1 Calycini
- 2b Pistillate disk entire or undulate; fruiting calyx not
accrescent. subsect. Subcrenulati
- 1b Anther-sacs parallel or slightly convergent apically, connective not
markedly enlarged.
- 3a Plants glabrous, veins obscure on both sides of lamina; pistillate
calyx not accrescent. subsect. 3 Aridi
- 3b Plants densely papillate-hirtellous or hirsute.
- 4a Pistillate calyx accrescent. subsect. 4 Grandisepali
- 4b Pistillate calyx not accrescent. subsect. 5 Hirtelli

Antipodanthus
