

Checklist of Vascular Plant Species at D.L. Bliss State Park

By Ellen Dean and Daniel McNair

Updated 2017

This plant list was originally submitted as Appendix B of a report submitted to California State Parks. Taxonomy mostly follows the *Jepson Manual*, 2012. However we used up-to-date keys to the genus *Mimulus* (*Erythranthe*) distributed by Steven Schoenig at his Jepson Herbarium workshop in 2011. We are recognizing the species *Mimulus microphyllus* in the park; this species is currently included as part of the species *Mimulus guttatus* in Baldwin et al. *The Jepson Manual*, 2012. The Jepson eFlora (accessed in 2016) was used especially for its treatment of the genus *Pyrola*, which differs from that from *The Jepson Manual*, 2012. Common names were obtained from CalFlora (2017), and we obtained the rare plant information from the Online Inventory of Rare Plants of California at the CNPS website. In the "observer" column, we make reference to two previous plant lists for the park in cases where our list is different. Showers and Bakken (1989) did not make vouchers, but Mitchell (1962) deposited vouchers at the Fresno State Herbarium (FSC). The vouchers from our survey are deposited at the UC Davis Center for Plant Diversity (DAV) with herbarium label data available online through the California Consortium of Herbaria. Our survey took place in 2016, toward the end of a five year drought in the state.
